

ASHMEET SINGH

Email: ashmeetace@gmail.com | Delhi, India

PROFILE SUMMARY

Enthusiastic and self-motivated learner with a strong interest in coding, web development, and Artificial Intelligence. Skilled in building functional web applications using Python, SQL, HTML, CSS, and JavaScript. Quick to grasp new technologies and eager to apply and expand technical knowledge through real-world projects.

EDUCATION

Undergraduate — Data Science & Artificial Intelligence (DSAI) — Masters' Union School of Business (Pursuing)

Class XII, CBSE Board — Delhi Public School, HRIT Campus — 81%

Class X, CBSE Board — Delhi Public School, HRIT Campus — 90%

TECHNICAL SKILLS

- Programming & Web Development: HTML, CSS, JavaScript, Python, SQL
- Microsoft Office: Word, Excel, PowerPoint
- Data & Analytics: Power BI (Data Modeling, ETL, Data Analysis & Visualization, Deployment)
- Artificial Intelligence: Working knowledge and keen interest in AI tools and applications

PROJECTS

School Management System (Python, MySQL, HTML/CSS)

- Designed a menu-driven Student Management System with separate Admin and User panels, using Python for backend logic and MySQL (via mysql.connector) for persistent storage.
- Modeled a normalized database with three tables — Student_Details, Teacher, and Feedback — using primary/unique keys and ENUM fields (e.g., Sex, Stream) to enforce data integrity.
- Implemented full CRUD functionality for students (add, search, update, delete) and teachers (add, delete, display), including a dynamic field-selection menu that lets the admin update any single student attribute without rewriting the full record.
- Built a marks look-up feature (View Marks) and a partial-match search for both students and teachers using SQL LIKE queries, plus an Add Feedback module for teachers to log remarks on individual students.
- Used parameterized queries throughout to prevent SQL injection and ensure safe handling of user input.

Route Log — Work Day Tracker (HTML, CSS, JavaScript)

- Built a single-page, calendar-based travel/work-log application with a custom-styled UI (Google Fonts, CSS variables for theming) and no external frameworks.
- Implemented a monthly calendar view where each date can hold multiple travel legs (from/to location, distance in km), with an editable panel to add, edit, or delete entries per day.
- Used the Haversine formula to calculate great-circle distance between coordinates, and browser localStorage (with JSON serialization) to persist all entries locally across sessions.
- Added a 'Jump to Date' control with dynamically populated day/month/year dropdowns for quick navigation to any date.
- Automatically computes and displays running totals — total distance and total days worked/travelled — both for the selected day and for the currently viewed month.

CERTIFICATIONS

- JavaScript Course with Certification: Unlocking the Power of JavaScript — Scaler Topics
- Introduction to HTML — Simplilearn SkillUp
- Introduction to MS Excel — Simplilearn SkillUp
- Harnessing the Power of Data with Power BI — Microsoft / Coursera
- Preparing Data for Analysis with Microsoft Excel — Microsoft / Coursera
- Extract, Transform and Load Data in Power BI — Microsoft / Coursera
- Data Modeling in Power BI — Microsoft / Coursera
- Data Analysis and Visualization with Power BI — Microsoft / Coursera
- Creative Designing in Power BI — Microsoft / Coursera
- Deploy and Maintain Power BI Assets and Capstone Project — Microsoft / Coursera

ADDITIONAL SKILLS

- Typing Speed: 39-40 WPM with 95% accuracy

LANGUAGES KNOWN

- Hindi — Speaking, Reading, Writing
- English — Speaking, Reading, Writing
- Punjabi — Speaking
